Supplementary Materials

Preparation and characterization of Bear bile loaded pH sensitive in-situ gel eye drops for ocular drug delivery

CONTENTS:

Figure. S-1 The morphology of pH-sensitive bear bile in-situ eye gel, (A) G1, (B) G2, (C) G3 at pH 5.0 (3000X).

Figure. S-2 Rabbits corneal pathological sections post-treatment with saline (a1, a2, a3) and pH sensitive in-situ gels G1, G2, G3 represented as b1, b2, b3, respectively.

Figure. S-3 HPLC chromatogram of raw TUDCA

Figure. S-4 HPLC chromatogram of bear bile powder

Figure. S-5 HPLC chromatogram of bear bile pH-sensitive in-situ eye gel

Figure. S-6 HPLC chromatogram of blank pH-sensitive in-situ eye gel

Figure. S-7 HPLC chromatogram of artificial tears
Figure S-1. The morphology of pH-sensitive bear bile *in-situ* eye gel, (A) G1, (B) G2, (C) G3 at pH 5.0 (3000X).
Figure S-2. Rabbits corneal pathological sections post-treatment with saline (a1, a2, a3) and pH sensitive *in-situ* gels G1, G2, G3 represented as b1, b2, b3, respectively (n=3).
