Supplementary data

A

![Graph showing latency time (sec) vs. day for different treatments: Control, BPA 0.5 mg/kg, BPA 5 mg/kg, BPA 50 mg/kg, and BPA 100 mg/kg. The graph indicates changes in latency over days with error bars for each group.](image-url)
The effects of different doses of BPA on the escape latency (sec) from day 1 to day 5 of training trial (A) and the time (sec) spent in the target quadrant (B) to find the hidden platform in Morris water maze test. Data are expressed as the mean±SD (n=6 animals per group). #P<0.05, ## P<0.01, #### P<0.0001 vs control group. Data were analyzed through one-way or two–way ANOVA coupled with Tukey-Kramer multiple comparisons test.
